AAK personal Care position on impurities

The substances described in Table 2, 3 and 4 are substances which AAK consider to be absent in the products in table 1 produced by AAK Sweden AB to which this document relates to. The lists are not complete but reflect the most common requests by the industry, e.g. it does not mean that impurities/substances not found in the list are found in the product.

Definition/disclaimer:

Free from/does not contain/absent of Impurities defined by AAK for cosmetic use are based on the following reasonings/criterias and to the best of our knowledge:

- The statement is based on detailed knowledge about the raw materials, processing, including processing aids used, e.g. based on to the best of our understanding which substances which can be found, created and if created removed during the processing.
- The substance or group of substance referred to are neither intentionally added nor likely to be created in any significant amount, i.e. below any technical avoidable level (below 100 PPM, unless otherwise stated or explicitly regulated).
- AAK does not on regular basis analyse and monitor the substance or group of substance found in this document.
- In case of conflict, for substances or substances groups within the AAK contaminant standard, the AAK contaminant standard will have precedence in case of conflicting information unless explicitly written otherwise. The contaminant standard contains substances AAK monitor according to AAK's monitoring program.
