

■ **Emollients – Semi-solid butter**

INCI NAME: HYDROGENATED COCO-GLYCERIDES

Akosoft 36™

This oxidative-stable, solid emollient is rich in traceable coconut, provides structure and consistency in the jar, and absorbs quickly, leaving a dry, non-greasy afterfeel.

Akosoft 36 is an oxidative-stable, 100% plant-based solid emollient rich in traceable coconut. The firm texture melts effortlessly into the skin, absorbing quickly without residue. It is suitable for both emulsions and anhydrous systems and is a particularly good fit for applications that require structure and consistency in the jar, and fast absorption with a soft-dry finish — such as face and eye care, color cosmetics, hair care, and deodorant sticks.

Recommended applications: face and eye care, color cosmetics, hair care, deodorant sticks

Appearance: off-white solid butter

Slip melting point: 35 °C

Solid fat content at 35 °C: 5%

Oxidative stability index: >100 hours at 110 °C

Certifications: COSMOS Approved, China Compliant, Halal, Kosher, Vegan-friendly

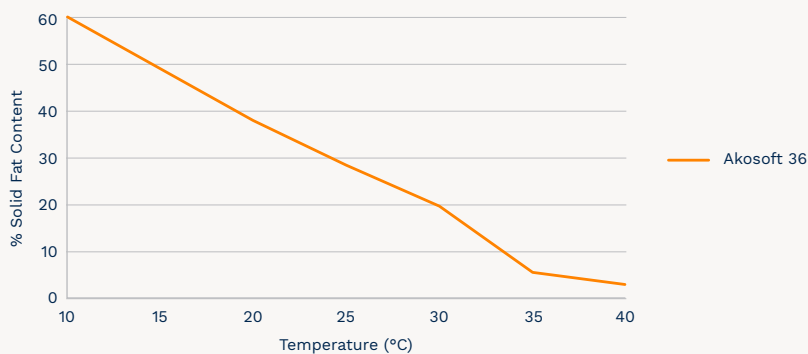

Fast absorption
Texture transformation
Oxidative stability
Structure building
Dry afterfeel
Long shelf life

Akosoft 36™

Key features and benefits:

- It's a 100% plant-based, solid butter rich in sustainably sourced, traceable coconut oil.
- Its saturated character ensures excellent oxidative stability, providing long shelf life without the need for added antioxidants.
- The neutral color and odor make Akosoft 36 particularly suitable as a base for fragrance-free and colorless formulations.
- It is firm in the jar and has a high solid fat content at room temperature, which helps give consistency and provides structure to formulations. From the liquid state, it crystallizes directly into a stable crystal form, supporting the creation of stable crystal networks and mitigating the risk of bloom in applications.
- Compared to traditionally used butters, it has a sharper melting profile in the 20–30°C range, which allows Akosoft 36 to melt faster when applied to the skin. It also absorbs quickly, melting effortlessly into the skin and leaving a soft, dry afterfeel.
- During application, it exhibits moderate spreadability, low cushion, low stickiness, and a short playtime due to its very fast absorption. On the skin, it feels light and leaves a non-greasy, powdery afterfeel.

Solid Fat content (%) based on NMR 26-40
